                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
(e) selecting a composition for inhibiting prostate cancer in a patient;
(f) assessing the prostate cell carcinogenic potential of a compound;
(g) determining whether prostate cancer has metastasized in a patient;
(h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer -

```
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Published_Applications_NA:*

Application US/09820003A
Patent No. US20020142382A1
GENERAL INFORMATION:
GENERAL INFORMATION: ISOLATED HUMAN RAS-LIKE PROTEINS,
TITLE OF INVENTION: ISOLATED HUMAN RAS-LIKE PROTEINS,
TITLE OF INVENTION: PROTEINS, AND USES THEREOF
FILLE REFERENCE: CLOOL196
CURRENT APPLICATION NUMBER: US/09/820,003A
CURRENT FILING DATE: 2001-03-29
NUMBER OF ESQ ID NOS: 39
NUMBER OF ESQ ID NOS: 39
SOFTWARE: FastEEQ for Windows Version 4.0
SEQ ID NO 1
LENGTH: 1405
TYPE: DNA
ORGANISM: Homo sapien

Sequence 3, Application US/09820003A

Patent No. US20020142382A1

GENERAL INFORMATION:

APPLICANT: MERKULOV, Gennady et al.

TITLE OF INVENTION: ISOLATED HUMAN RAS-LIKE PROTEINS,

TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING THE

TITLE OF INVENTION: PROTEINS, AND USES THEREOF

FILE REFERENCE: CL001196

CURRENT APPLICATION NUMBER: US/09/820,003A

CURRENT FILING DATE: 2001-03-29

NUMBER OF SEQ ID NOS 39

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 3

/note="Organ: Left Pubic Bone; Vector: pT773-Pac
/pharmacia) with a modified polylinker; Site_1: EcoR I;
Site_2: Not I; NCI_CGAP_EDI is a normalized cDNA library
containing the following tissue(s): Chondrosarcoma cell
line CS5. The library was constructed according to Bonaldo
, Lennon and Soares, Genome Research, 6:791-806, 1996.
First strand cDNA synthesis was primed with an oligo-dT
primer containing a Not I site. Double stranded cDNA was
ligated to an EcoR I adaptor, digested with Not I, and
cloned directionally into pT773-Pac vector. The
oligonuclectide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is GCTCAAGGCT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gene Index

NCI_CGAP_Ch2 is a normalized cDNA library containing the
following tissue(s): chondrosarcoma Grade II. The library
was constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dT primer containing a
Not I site. Double stranded cDNA was ligated to an Ecor I
adaptor, digested with Not I, and cloned directionally
into pT7T3-Pac vector. The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
(dT)18 tail. The sequence tag for this library is
     Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gene Index

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note="Organ: Knee; Vector: pT773-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; NCI_CGAP_Ctl is a normalized cDNA library containing the following tissue(s): Osteoarthritic Cartilage The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-805, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT).8 tail. The sequence tag for this library is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TAG_TISSUE-osteoarthritic cartilage

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT/T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CGATTAGCGA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /tissue_type="lens"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC cytostatic; immunosuppressive; nootropic; neuroprotective; antivital; CC antiallergic; hepatotropic; antidiabetic; antifingal; antiparasitic; and cardiant. The polynucleotides and polypeptides are useful for CC preventing, treating or ameliorating a medical condition in e.g. humans, CC mice, rabbits, goats, horses, cats, dogs, chickens or sheep. The CC polypeptides can also be used as a food additive or preservative to cincrease or decrease storage capabilities. The polynucleotides are CC useful for chromosome identification. They are also useful as probes for CC diagnosing a disorder related to the female reproductive system, CC particularly breast and/or overy cancer. They are also useful in the gene CC diagnosis, treatment and prevention of cancer, immune disorders, CC cardiovascular disorders, wound healing, neurological diseases and CC infectious disease. AAC59957 to AAC59965 and AAB34772 represents sequence used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     preventing, treating or ameliorating a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The polynucleotides are useful for chromosome identification. They are also useful as probes for diagnosing a disorder related to the female reproductive system, particularly breast and/or ovary cancer. They are also useful in the gene therapy of breast and ovarian cancer. Nucleic acids, protein, antibodies, agonists and antagonists from the present invention are useful in the diagnosis, treatment and prevention of cancer, immune disorders, cardiovascular disorders, wound healing, neurological diseases and infectious disease, AAC59957 to AAC59965 and AAB34772 represents sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            and cells the genes are expressed in Examples of activities include: cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; intidiabetic; antiinflammatory; antilocer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; and cardiant. The polynucleotides and polypeptides are useful for preventing, treating or ameliorating a medical condition in e.g. humans,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Fifty nucleic acid molecules encoding human secreted proteins, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Page 416-417; 425pp; English.

The polynucleotide sequences given in AAC59966 to AAC60015 encode the CC hamsa secreted proteins diven in AAB34822. AAB34823 to AAB34823 represent human secreted polypeptide sequences and proteins CC invention. Human secreted polypeptide sequences and proteins and continued invention. Human secreted proteins have activities based on the tissues CC and cells the genes are expressed in Examples of activities include: CC cytostatic; immunosuppressive; noctropic; nattifulatory; antiparastic; and collistic immunosuppressive; noctropic; antifulatory; antiparastic; and collistic candidatory; antiparastic; and collistic individual; cc antiallergic; hepatotropic; antiparastic; antifulatory; antiparastic; and cc cardiant. The polynucleotides and polypeptides are useful for preventing, treating or ameliorating a medical condition in e.g. humans, cc polypeptides can also be used as a food additive or preservative to concrease or decrease storage capabilities. The polynucleotides are collapsoring a disorder related to the female reproductive system, cc diagnosing a disorder related to the female reproductive system, cc aponists and antagonists from the present invention are useful in the gene cc diagnosis, treatment and prevention of cancer, immune disorders, cardiovascular disorders, wound healing, neurological diseases and cc used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Qy
                                                                               The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, inmunomodulatory activity and activity, tissue growth factor activity, in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; cytokine; cell proliferation; cell differentiation; gene th vaccine; peptide therapy; stem cell growth factor; haematopolesis; tissue growth factor; immunomobulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                        Note: The sequence data for this patent did not form specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                  Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukaemia, inflammation and immune

                     CC Sequences AAF21614 - AAF22031 represent DNA sequences encoding human CC proteins AAB59711 - AAB59128. The DNA and protein sequences are CC associated with breast and ovarian cancer. Included in the invention are CC sequences AAF22032 - AAF22040 and AAB59129 which are used in the CC isolation and characterisation of the DNA and protein sequences of the CC invention. The breast and ovarian cancer associated DNA, protein, agonist CC or antagonist sequences exhibit cytostatic; immunosuppressive; CC nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; CC antidabetic; antifinflammatory; antivicer; vulnerary; anticonvulsant; CC antibacterial; antifungal; antiparasitic and cardiant activity. The CC polynucleotide and protein sequences are used in the diagnosis of cancer, CC proteins, agonists and agonists may also be used in the diagnosis, CC proteins, autoimmune haemolytic anaemia, autoimmune thvroidi+i-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      뭐

CC syndromes such as aplastic anaemia, ischaemic injuries such as myocardial CC infarction, stroke, and reperfusion injury, toxin-induced diseases such CC as alcohol-induced liver damage, cirrhosis, and lathyrism, wasting CC diseases such as cachexia, viral infections, and osteoporosis. They can CC also be used to stimulate cell proliferation for use in transplantation CC or to produce cells to fight an infection or a cancer or to correct a CC genetic defect in a disease such as sickle cell beta thalassemia, cystic CC fibrosis or Huntington's chorea. Antagonists can be used to prevent or CC treat a disorder associated with cell proliferation e.g. cancers or CC treat a disorder associated with cell proliferation e.g. cancers or CC syndrome, altergies, asthma, atherosclerosis, bronchitis, cholecystitus, CC diabetes mellitus, emphysema, atropic dermatitis, dermatomyositis, CC diabetes mellitus, emphysema, atrophic gastritis, glomerulonephritis, CC gout, Graves' disease, hypercosinophila, irritable bowel syndrome, lupus cerythematosus, multiple sclerosis, myasthenia gravis, inflammation, CC complications of cancer, haemodialysis, extracorporeal circulation, CC complications of cancer, haemodialysis, extracorporeal circulation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

```
The invention relates to novel isolated human secreted polypeptides (I) cand polynucleotides (II). (I) and (II) are useful for treating the inflammatory conditions such as arthritis, nephritis. Crohn's disease, considered in increasing haematopolesis, stem cell survival, bone growth can remodeling. (I). (II) and modulators of (II) are useful for prophylaxis or treatment of one or more cancers. (II) is also useful for creating transgenic animals useful for studying modulators of the polypeptides. (I) induces the proliferation of neural cells and regeneration of nerve can brain tissue and is useful for the treatment of central and peripheral nervous system disease, and amyotrophic lateral carbivity, regulation of heematopolesis, and is useful for treatment of central and carbivity, regulation of heematopolesis and is useful for treatment of creating myeloid cor lymphoid cell disorders, platelet disorders such as thromboytopenia carbivity, regulation of bone, cartilage, tendon, ligament and/or nerve culcers, for treating osteoporosis, osteoarthritis, bone degenerative culcers, for treating osteoporosis, osteoarthritis, bone degenerative considered infections, autoimment and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and considers including severe combined immunodeficiency (SCID), bacterial or reperfusion and conditions, such as asthma or other respiratory problems. (I naddition, (I) affects biorhythms or circadian cycles of rhythms, altergic for treatily and can act as an antigen in a vaccine composition to raise an integer of cartivity and can act as an antigen in a vaccine composition to raise an cimume as a shame or other respirates of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tang

                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL101640-ABL10175) and the encoded proteins (ABL101840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic agenes from Drosophila interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI;
